

①

# Bit Manipulation

Binary Number Conversion  
(1's & 2's Complement)

②

$$(7)_{10} \rightarrow (111)_2$$

7 to the  
Base 10  
(Decimal Number)

2	7	1	↑
2	3	1	↑
1	1	1	

Remainder of 7/2  
Remainder of 3/2  
Remainder as 1 is not divisible by 2.

Consider the remainders as strings and add them in upward direction.

$$"1" + "1" + "1" = 111$$

111 is the Binary Format of  $(7)_{10}$

③  $(13)_{10}$

$$(1101)_2$$

2	13	1	↑
2	6	0	↑
2	3	1	↑
1	1	1	

$$"1" + "1" + "0" + "1" = 1101$$

2

$$3 \cdot 2 \quad 1 \leftarrow 0$$

Q.  $(1 \ 1 \ 0 \ 1)_2 \rightarrow (13)_{10}$

Start from the right and move onto the left.

number. X <sup>(in box)</sup> same for each number in binary equivalent from left to right

# Aiaikoo

$$1 \times 2^0 + 0 \times 2^1 + 1 \times 2^2 + 1 \times 2^3$$

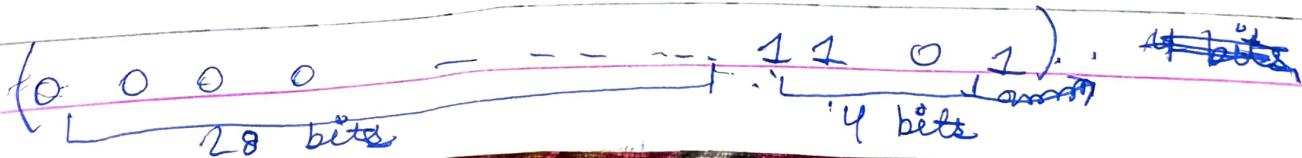

$$1 + 0 + 4 + 8 = (13)_{10}$$

Q.  $(\overset{2}{1} \overset{1}{1} \overset{0}{1})_2 \rightarrow (7)_{10}$

$$\cancel{1} \times 2^0 + \cancel{1} \times 2^1 + \cancel{1} \times 2^2$$
 ~~$\cancel{1} \times 2^0 + 1 \times 2^1 + 1 \times 2^2$~~ 

$$1 + 2 + 4 = 7$$

When we are writing a number on computer such as 13, it doesn't store the number as 13 instead it stores ~~13~~ in the form 1101. But whenever a computer stores a number it stores in 32 bits (int)

③

• Zeros are stored in place of the remaining bits.

And when we are printing the value of a computer converts binary into numbers (decimal).  
formal

# Aiakoo

Computer always converts the number into the binary and then stores it. almost short.

For integers 32 bits is used & we will mostly come across this.

A long int is that signed integral type. that is atleast 32 bits

A long long is a signed integral type is atleast 64 bits.

The concepts of short int can be applied to long long bits. as they are same.

4.

(1<sup>s</sup> complement)

a) 1<sup>s</sup> complement of 13.

$$(13) \rightarrow (1101)_2$$

flip. all the bits  
 $(1101)_2$

Aiaikoo

Flip all the bits means  
all the zeroes to one.  
the ones to zeroes.

flipping  
and all

b) 1<sup>s</sup> complement of 7.

$$(7) \rightarrow (111)_2$$

↓ flip all the bits

$$(000)_2$$

(2<sup>s</sup> complement)

Step - 1) Find the 1<sup>s</sup>. complement,  
Step 2). Add 1 to it.

a) 2<sup>s</sup> complement of 13

$$\begin{array}{r} (0010)_2 \\ (0001) \\ \hline (0011)_2 \end{array}$$

1<sup>s</sup> complement  
Add 1

$(0011)_2 \rightarrow 2^s$  complement

5:

(b) 2's complement of 7.

$$\begin{array}{r} 0\ 0\ 0 \\ \cancel{0}\ \cancel{0}\ \cancel{1} \\ \hline 1\ 1\ 1 \end{array} \quad 2^s$$

1's

complement

Add 1.

Complement

$$\begin{array}{r} 0\ 0\ 1 \\ 0\ 1\ 1 \\ \hline 1\ 0\ 0 \end{array} \quad 2^s$$

# Alaikoo

Operators

① And Operator → .

- And operator means all true is true.
- One False is false.
- True represents 1 and false represents 0.

(a)  $m = 13 \& 7$

$$13 \rightarrow (1\ 1\ 0\ 1)_2 \quad 7 \rightarrow (1\ 1\ 1)_2$$

$$\begin{array}{r} 1\ 1\ 0\ 1 \\ \underline{\circlearrowleft 1\ 1} \\ 1\ 0\ 1 \end{array} \quad 0\ 1\ 0\ 1 \quad 2$$

represents  
of 5.)

if there is  
(0,1) or (0,0)  
it will be  
considered as 0.

if there is (1,1) then it will be 1.

(6)

② Or Operator →.

1 true means true  
all false means false.

(a)

**Aiaikoo**

$$\begin{array}{r} \textcircled{1} \\ \textcircled{0} \\ \hline \end{array} \begin{array}{cccc} 1 & 0 & 1 \\ 1 & \textcircled{1} & 1 \\ \hline 1 & 1 & 1 & 1 \end{array} \begin{array}{l} 13 \\ 7 \\ 19 \end{array}$$

number represent n

③ X O R Operator →.

no. of 1s → odd → 1.  
no. of 1s → even → 0.

(a)  $n = 13 \wedge 7$ .

$$\begin{array}{r} 0 \cdot 1 \quad 1 \quad 0 \cdot 1 \\ 0 \quad 0 \quad 1 \quad 1 \cdot 1 \\ \hline 0 \cdot \textcircled{1} \cdot 0 \quad 1 \quad 0 \end{array} \begin{array}{l} 13 \\ 7 \\ 10 \end{array}$$

number represent n

(4)

Shift Operators →.

(a) Right shift operator →. ( $>>$ )

i).  $n = 13. >> 1$

13 shift by 1

7

212

0 1 1 0 ① → ~~we~~ we are going to remove the ~~1~~  
1

0 1. 10. E. 1B >> 1.

A A

$n = 13 >> 2$

0 1 1 0 1

$0 \quad 1 \quad 1. \rightarrow 3.$  ( integer ).

$$\textcircled{1} \textcircled{2} \textcircled{3} \quad m = 13 >> \textcircled{4}$$

$$\begin{array}{cccccc} x & x & x & x \\ 0 & 1 & 1 & 0 & -1 \\ \downarrow & & & & \end{array}$$

$\circ \circ \rightarrow \circ$  (integer)

Formula for right shift operator

$$n > k \Leftrightarrow \left( \frac{n}{2^k} \right)$$

i). 13 >> 1.

$$\frac{13}{2(1)} = 6 \dots$$

8

222

$$\text{ii) } \frac{13}{2^2} = 3$$

$$\text{iii) } \frac{13}{2^4} = 0.$$

→ Why the formula perfectly fits?

# Alaikoo

$$1101 \rightarrow 1 \times 2^3 + 1 \times 2^2 + 0 \times 2^1 + 1 \times 2^0$$

1.3 >> 1.

$$110 \rightarrow 1 \times 2^2 + 1 \times 2^1 + 0 \times 2^0$$

The second binary is obtained by dividing the 1st binary by two.

How does the computer differentiates positive and negative numbers?

The computer stores number in 32 bit signed integer. Inside the 31 st. bit is used to store the sign.

$$1 \rightarrow -ue \quad 0 \rightarrow +ue$$

~~4~~ ~~5~~ ~~6~~ ~~7~~ ~~8~~ ~~9~~ ~~10~~ ~~11~~ ~~12~~

31 st. bit  
(sign).

$$\frac{1}{0} = \frac{0}{0} - \frac{0}{0} \quad \frac{1}{1} = \frac{1}{0} = \frac{1}{1} \rightarrow 13$$

(9)

(123)

Q. When we want to store a -ve number.

First we are going to convert it into binary string of that number if it was positive and then we are going to find the ~~the~~  $2^s$  complement.

$$i) \therefore 13 \rightarrow \underline{0} \dots \underline{1} \cdot \underline{\frac{1}{0}} \underline{1}$$

$\uparrow$  31st. bit

$$1^s. \text{ complement of } 13 \rightarrow \underline{1} \dots \underline{0} \underline{0} \underline{1} \underline{0}$$

Add 1 for making it ~~the~~  $2^s$  complement

~~the~~  $2^s$  complement of 13  $\rightarrow$

$$\boxed{1} \dots \underline{0} \underline{0} \underline{1} \underline{1}$$

$\downarrow$  31st. bit

$\downarrow$   $2^s$  complement of 13.

Largest value that you can store as an integer  $\rightarrow$ .

$$\begin{array}{ccccccccc} 0 & \underline{1} & \underline{1} & \dots & \underline{1} & \underline{1} \\ \uparrow & & & & \uparrow & & & & \uparrow \\ \text{last bit} & & & & & & & & 1 \text{st bit} \end{array}$$

$$\begin{aligned} &= 2^{30} + 2^{29} + 2^{28} + \dots + 2^0 \\ &= 2^{31} - 1 = \text{Int} - \text{Bias} \end{aligned}$$
